# Conclusion

"Artificial intelligence would be the ultimate version of Google. The ultimate search engine that would understand everything on the Web. It would understand exactly what you wanted, and it would give you the right thing. We're nowhere near doing that now. However, we can get incrementally closer to that, and that is basically what we work on."

Larry Page, co-founder and developer of Google

<https://spd.group/machine-learning/fraud-detection-with-machine-learning/>

“The judiciary is considering AI to boost efficiency in the judicial system. Artificial intelligence refers to the simulation of human intelligence in machines that are programmed to think like humans and mimic their actions. This type of technology is the way forward.”
